

Aqua NJ Annual Flushing Map

March 11, 2020

With the warm weather, Aqua NJ is going to begin their annual flushing program in hopes that the weather stays warm. They will be starting on Wednesday, March 11th with this section of town and they will post the notice for this section through March 27. They expect that they will be able to complete it sooner.

The only concern for the residents will be slight decrease of pressure right in the area that they are flushing. They have the possibility of stirring up sediment that is in the line, that could cause a discoloration of the water, but this possible discoloration has been very minor throughout the years. If it does occur, they recommend running ONE COLD water tap (bathtub) for five minutes to clear up the discoloration.
