Subject: Solid Waste Management Plan – Mercer Mall

The proposed 2,200 Square Foot pad development includes a dedicated masonry trash enclosure to screen all solid waste containers required for operation. The enclosure is designed to accommodate a four (4) cubic yard trash container, a four (4) cubic yard recycling container, and two (2) sixty-four (64) gallon containers for composting materials – consistent with operations at similar Starbucks stores throughout the region.

These containers will be serviced by a reputable hauler responsible for all Shopping Center waste management and will be incorporated into the current hauling schedule. Trash is picked up and removed from the property 3x per week on Mondays, Wednesdays, and Fridays. Recycling and composting are picked up and removed from the property 2x per week on Monday's and Thursdays.
