

New Jersey American Water Plans for Temporary Treatment Change in Water Treatment Plants Serving Central and Northern Parts of the State

CAMDEN, N.J. (FEB. 1, 2023) – As part of an annual maintenance program for its water distribution system, New Jersey American Water will temporarily change the water treatment process from a chloramine (combined) residual to free chlorine residual at the company's Raritan-Millstone and Canal Road Water Treatment plants. These surface water treatment plants serve New Jersey American Water customers in the following counties: Essex, Hunterdon, Mercer, Middlesex, Morris, Somerset, and Union.

"This periodic, scheduled change in disinfectant is a standard water treatment practice that allows us to continue to provide safe, high-quality water for our customers," said Laura Norkute, Director of Water Quality and Environmental Compliance, New Jersey American Water. "We perform this distribution system maintenance program every year as an added measure to further disinfect the pipelines in our distribution system."

The temporary treatment process will begin the week of February 20, 2023 and continue until the end of April 2023. During this period, some customers may notice a slight taste and smell of chlorine in their water. This is normal and will only be temporary until the system maintenance is complete. Customers who wish to reduce the taste of chlorine can place water in an uncovered glass container in the refrigerator overnight to dissipate chlorine faster.

"We will continue to monitor water quality in the system to continue to provide service that meets or is better than federal and state drinking water standards," Norkute said.

The temporary treatment change applies to New Jersey American Water customers in the following communities. *(Communities with an asterisk purchase water from New Jersey American Water.)*

Essex County: Irvington, Maplewood, Millburn

Hunterdon County: Flemington Borough*, Raritan Township, Readington Township, and Tewksbury Township
